Education

B.S. Software Engineering – Expected Graduation: 2027

Shaheed Zulfikar Ali Bhutto Institute of Science and Technology
(SZABIST) University, Karachi. Semester: 5th, CGPA: 3.34

Computer Science | NCR-CET College, Shahrah-e-Faisal, Karachi

Technical Skills

Languages: JavaScript, HTML, CSS

Frameworks: Bootstrap 5, Tailwind

Databases: PostgreSQL, Microsoft SQL server, MySQL Workbench.

Tools/Cloud: GitHub, Postman, GitHub Pages.

Projects

1. [netflix-clone](#) (HTML, CSS)

- Developed a Landing page using HTML, CSS of Netflix website.

Live (GitHub Pages): <https://muhammadhad.github.io/netflix-clone/>

2. [e-commerce-page](#) (HTML, CSS (Bootstrap 5))

- Developed a modern style Landing Page of E-commerce.

Live (GitHub Pages): <https://muhammadhad.github.io/e-commerce-page/>

3. [toronto-cupcake](#) (HTML, CSS, JS (built-in))

- Developed a user-friendly UI multi-page site of Toronto Cupcakes for events, organizations etc.

Live (GitHub Pages): <https://muhammadhad.github.io/toronto-cupcake/>

4. [image-gallery](#)(HTML, CSS, vanilla JS)

- A simple and responsive image gallery with search and lightbox functionality built with HTML, CSS, and vanilla JavaScript.
- Features:
 1. Responsive grid layout for images
 2. Search/filter images by description
 3. Lightbox modal to view images enlarged
 4. Previous/Next navigation in lightbox
 5. Hover effects and smooth animations
 6. Click outside to close lightbox

Live (GitHub Pages): <https://muhammadhad.github.io/image-gallery/>

5. [contact-form](#)(HTML, CSS, vanilla JS)

- A simple contact form with minimal and clean UI with accessibility and SEO 100%.

Live (GitHub Pages): <https://muhammadhad.github.io/contact-form/>

Achievements

- Participated in the ‘Speed Coding’ and ‘Debugging Competition’ at Zab-e-Fest 2024.
- Certified in “Intro to Frontend”, “Google Prompting Essentials” via Coursera.

Additional Experience

- Currently working on improvements in JS and upscaling the foundations.
- Developed a “Recipe-Snap” web-based application leveraging AI tool (e.g. Firebase Studio), enabling the user to provide a screenshot or link of the meal they want to build, and AI will tell them the ingredients they can use. I used Google Gemini API from “Google AI Studio”.
